STRAIN-ATCC 33090 / DSM 20649 / NCTC 11288 / Serovar 6a;
Morse R., Collins M.D., Balsdon J.T., Reading S., Richardson P.T.;
"Cloning part of the rpoc gene encoding the B' subunit of the DNA-
dependent RNA polymerase from some Gram-positive bacteria and
comparative amino acid sequence.";
Submitted (AUG-1996) to the EMBL/GenBank/DDBJ databases.
-- FUNCTION: DNA DEPENDENT RNA POLYMERASE CATALYZES THE TRANSCRIPTION
OF DNA INTO RNA USING THE FOUR RIBONUCLEOSIDE TRIPHOSPHATES AS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         IDVVPPNVRDLLDILRERGKLSVGDLAELLYRV-RRFDLLKRIL------KMD

N.Alternate names: RAS-associating death domain containing protein FADD; mediator of C; Species: Homo sapiens (man)
C; Accession: A56912; 138041
R; Chinnaiyan, A.M.; O'Rourke, K.; Tewari, M.; Dixit, V.M.
C; Accession: A56912; 1995
A; Title: FADD, a novel death domain-containing protein, interacts with the death doma A; Reference number: A56912; MUID:95277837; PMID:7538907
A; Scteus: preliminary
A; Accession: A56912
A; Status: preliminary
A; Molecule type: mRNA
A; Residues: 1-208 cCHI>
A; Cross-references: GB:1024231; NID:9809486; PIDN:AAA86517.1; PID:9809487
B; Boldin, M.P.; Varfolomeev, E.E.; Pancer, Z.; Mett, I.L.; Camonis, J.H.; Wallach, D. J. Biol. Chem. 270, 7795-7798, 1995
A; Title: A novel protein that interacts with the death domain of Fas/APO1 contains a A; Accession: TabAA1
R; Nicholas, J.; Cameron, K.R.; Honess, R.W.

Nature 355, 362-365, 1992

A; Title: Herpesvirus saimiri encodes homologues of g protein-coupled receptors and cy
A; Reference number: $20243; MUID:92115001; PMID:1309943

A; Accession: A58939

A; Accession: A58939

This is the amino acid sequence of the alpha isoform of novel human G1 protein. The sequence is deduced from an isolated skin cc human G1 protein. The sequence is deduced from an isolated skin cf libroblast cDNA clone (see AAV52968). G1-alpha (also called CASH alpha, CASH being caspase homologue) and a shorter isoform, G1-beta (see AAW7804), represent 2 splice variants of the G1 protein. These CG is proteins are capable of binding to, or interacting directly or indirectly, via their N-terminal MORT modules, with MORT-1 or with MORT-binding proteins such as Much (CASP-10) and MACH (CASP-8), and thereby of binding to the intracellular domain of the FAS-R such as a mediators or of binding to the intracellular commain of the p55 tumour necrosis factor (TANP) receptor, to which MORT-1 binds, or of binding of the intracellular commain of the p55 tumour necrosis factor (TANP) receptor, they care considered as mediators or modulators of FAS-R having a role in CG or, the signalling process that is initiated by the binding of TANF to P55-R. The longer isoform also case used to requiate call death or inflammatory processes. (II) is care used to requiate call death or inflammatory processes. (II) is care used to requiate call death or inflammatory processes. (II) is coll death, and its inhibitors augment/enhance the processes. (I) and (II) requiate the FAS-R ligand or TWF effect on the sequence encoding (II), which kills the cell. Antisense cells can be treated using a viral vector encoding a viral suffaces protein, which binds a specific cell surface receptor and a cellects can also be regulated using a vector encoding a ribozyme celects can also be regulated using a vector encoding a ribozyme celects.
                                                                                                                                                                 New DNA encoding isoforms of G1 protein which bind MORT-1 - and regulate the effects of FAS and tumour necrosis factor receptors, useful for killing of cells e.g. HIV and cancer cells

The sequence is deduced from an isolated cDNA clone (see AAV50436). Casper protein interacts with FADD and is recruited to Fas. It also interacts with caspase-8 and caspase-3, and with TRAFI and TRAF2. A claimed isolated polypeptide comprises the full-length Casper amino acid sequence, or a fragment of at least 6 consecutive amino acid residues including at least one of residues 1-96, 1-202, 1-435, 78-480, 192-480, 390-480 or residue 80. The isolated protein, or cells that express the protein, can be used to screen for agents, e.g. antibodies or T-cell receptors, that specifically modify the binding of Casper to a target, and thus its function.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ο̈́
                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                  Theumatoid arthritis), and virtal infections (e.g. herpes viruses, pox viruses and adenoviruses), graft versus host disease, acute disease, acute graft rejection, and chronic graft rejection. The products can also be used for detection, diagnosis and drug screening.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        the first examples of a naturally occurring catalytically inactive caspase that can act as a dominant negative inhibitor of apoptosis. The oblypeptides and agonists can be used for treating e.g. Alzheimer's disease, Parkinson's disease, rheumatoid arthritis, septic shock, sepsis, stroke, CNS inflammation, osteoporosis, ischaemia, reperfusion injury, cell death associated with cardiovascular disease, polycystic kidney disease, apoptosis of endothelial cells in cardiovascular disease, degenerative liver disease, multiple sclerosis (MS) and head injury damage. Antagonists of the polypeptides can be used for treating cancers (e.g. follicular lymphomas, carcinomas with p53 mutations, hormone-dependent tumours, and cancers of the breast, ovary, prostate, bone, liver, lung, pancreas, and spleen), autoimmune disorders (e.g. systemic lupus erythematosus, immune-related glomerulonephritis,

The present sequence represents human FIN-1 (FLICE inhibitor-1), which is a caspase. FLICE (ICE-LAP7) is a protease of the interleukin-converting enzyme family, a protein involved in the regulation of cell death. A host cell, comprising a vector containing FIN-1 encoding DNA, can be used to produce FIN-1. The vector containing the DNA can be used for producing a cell which expresses a polypeptide by transforming or transfecting the cell with it so that the cell expresses the polypeptide concoded the human cDNA contained in the vector. The polypeptide or its antagonist can be used in the treatment of patients needing FIN-1 by in-vivo administration. Conditions which may be treated include viral infection, tumours (especially solid tumours), ischaemic injury (e.g. stroke or myocardial infarction), neurodegenerative disorders (e.g. Dolycystic kidney disease, chronic degenerative liver disease, acquired immunodeficiency syndrome (AIDS) and applastic anaemia. The polynucleotides may also be used for chromosome identification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RVRRFDLLKRILKMDRKAVETHLLRNPHLVSDYRVLMAEIGEDLDKSDVSSLIFLMKDYM 120

The present invention describes a new treatment of a condition characterised by vascular wall inflammation in a subject comprising administering a FID molecule to inhibit Fas ligand-mediated apoptosis of vascular endothelial cells in the subject. The method can be used to treat atherosclerosis, transplant arteriosclerosis and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
The present sequence represents novel human MACH-related inducer of toxicity (MRIT) isoform MRIT alpha 1, a CED-4 homologue that interacts simultaneously with caspases and Bcl-2 family be polypeptides, and which has pro-apoptotic activity. Multiple soforms of MRIT have been identified, some of which function to induce caspase dependent apoptosis in mammalian cells, e.g. MRIT alpha 1 and MRIT beta 1 (see AX105789), while others have anti-apoptotic activity, e.g. MRIT alpha 2 (see AX105788). MRIT alpha 1 includes an N terminal death effector domain and a c-terminal caspase homology domain, but is not a cysteine protease. Selective enhancers and inhibitors of MRIT apoptotic activity can be identified and used to treat diseases mediated by the dysfunction of programmed cell death or proliferation. A cell accumulation disorder such as cancer, autoimmune disease, viral infection,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MSAEVIHQVEEALDTDEKEMLLFLCRDVAIDVVPPNVRDLLDILRERGKLSVGDLAELLY

                                                                                                                                                                                                                                       angiogenesis or atherosclerosis is treated by administering an agent that selectively enhances MRIT apoptotic activity, thereby inducing apoptosis in a subject. A disorder of cell loss, such as a neurodegenerative disorder, including Alzheimer's disease, Parkinson's disease, retinitis pigmentosa, stroke, aplastic anaemia, myocardial infarction or AIDS can be treated by administering an agent that selectively inhibits MRIT apoptotic

```
anti-apoptotic polypeptide which comprises a portion of an anti-apoptotic polypeptide which inhibits apoptosis of lymphocytes in combination with a transport group is described. The transport group is capable of transporting the chimeric group or fusion peptide across the cell membrane. The anti-apoptotic polypeptide is FLICE-like inhibiting protein (FLIP) which inhibits Rs and THF mediated apoptosis by inhibiting binding of Caspase-8 to the Fas areceptor complex, thus shutting off the downstream Fas signalling pathway. The chimeric group and fusion peptide are useful for inhibiting ligand-induced apoptosis by bringing them into contact with T cells. The chimeric group is useful for expanding T cells in vitro e.g. T cells specific for particular antigens such as tumour-specific antigen, for enhancing T cells antigens and as tumour-specific antigen, for enhancing T cells antigens and set inhibit the apoptosis of chronically activated chimeric group is also useful for therapeutic, prophylactic or the chimeric group is also useful for therapeutic, prophylactic or macromolecules such as anti-apoptotic polypeptides and nucleic acids encoding such polypeptides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EERYKMKSKPLGICLIIDCIGNETELLRDTFTSLGYEVQKFLHLSMHGISQILGQFRCMP 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides recombinant nucleic acid molecules encoding usurpin-alpha (lacking the first death effector domain (DED) or its prodomain, usurpin-beta or usurpin-game. Usurpin polypeptides are useful for in vitro and in vivo identification of usurpin-procaspase-8 interaction inhibitor. Usurpin is useful as modulator of the sensitivity of cells to CD95(Fas/Apo-1) mediated apoptosis. Modulation of apoptosis is useful for treating diseases like autoimmune diabetes, cancer and Parkinson's disease. Activators and inhibitors of usurpin-procaspase-8 interaction are also useful for treating various diseases mediated by apoptosis. Gustpin provides an attractive model for modulating caspase activation. Sensitivity of cells bearing CD95(Fas/Apo-1) receptor can be regulated at several levels in the presence of usurpin, conferring resistance to Fas-ligand cell death. The present sequence represents

The present sequence represents a human apoptosis associated protein designated HAPOP-1. HAPOP proteins are apoptosis regulators which have antiarteriosclerotic, cytostatic, antiarthritic and hapatotropic activity. A pharmaceutical composition compurising HAPOP in conjunction with a carrier, a purified antagonist of HAPOP, vectors and agonists of HAPOP, are administered for diagnosing, treating or preventing disorders associated with increased or decreased apoptosis, e.g. cell proliferative disorders such as atherosclerosis, arteriosclerosis and cancers; immune disorders such as rheumatoid arthritis, systemic lupus erythematosus; creproductive disorders such as prostate cancer, endometrial and ovarian tumours; and gastrointestinal disorders such as prostate cancer, endometrial and ovarian tumours; and gastrointestinal disorders such as prostate cancer, endometrial and ovarian tumours; and gastrointestinal disorders such as prostate cancer, endometrial and ovarian tumours; and gastrointestinal disorders such as prostate cancer, and or the orrelated with diseases and are also useful to detect differences in the chromosomal location due to translocation, inversion etc., among normal, carrier, or affected individuals. The combination of the therapeutic agents may act synergistically to effect the treatment or prevention of various disorders providing improved efficacy with lower designed and thus reducing the potential for adverse side
